

Exhibit "A" - Pending Claims

1 1. A fluid supply system for supplying a first fluid or a second fluid to a press, the
2 fluid supply system comprising:
3 a first supply line plumbed to supply the first fluid to the press;
4 a first supply valve in said first supply line to control flow in the first supply line;
5 a second supply line plumbed to supply the second fluid to the press;
6 a second supply valve in said second supply line to control flow in the second supply
7 line;
8 a first return line connected to drain fluid from the press;
9 a conduit in communication with said first and second supply lines and said first return
10 line; and
11 a conduit valve in said conduit to control flow through the conduit, wherein opening the
12 conduit valve enables fluid from the first or the second supply line through the conduit to by-pass
13 the press.

1 2. The fluid supply system of claim 1, further comprising: a programmable logic
2 controller connected to actuate at least one of said first supply valve, second supply valve, and
3 conduit valve to control fluid flow through the fluid supply system.

1 3. The fluid supply system of claim 2, further comprising:

2 a pump in communication with said programmable logic controller, said pump further
3 being connected to at least one of said first supply line, said second supply line, said first return
4 line and said second return line for selectively moving fluid therethrough.

1 4. The fluid supply system of claim 3, further comprising:
2 a first fluid supply line adapted to be connected to a first fluid supply source;
3 a first fluid return line adapted to be connected to said first fluid supply source;
4 a second fluid supply line adapted to be connected to a second fluid supply source; and
5 a second fluid return line adapted to be connected to said second fluid supply source.

1 5. The fluid supply system of claim 2, further comprising a first sensor means
2 electrically connected to said programmable logic controller for detecting a fluid level in a first
3 fluid supply source.

1 6. The fluid supply system of claim 2, further comprising second sensor means
2 electrically connected to said programmable logic controller, for detecting a fluid level in said
3 second fluid supply source.

1 7. The fluid supply system of claim 5, wherein said first sensor means is a non-
2 contact level sensor.

1 8. The fluid supply system of claim 6, wherein said second sensor means is a non-
2 contact level sensor.

1 9. The fluid supply system of claim 2, wherein said conduit valve is electrically
2 connected to said programmable logic controller.

1 10. The fluid supply system of claim 3, further comprising:
2 a cleaning fluid supply source for containing cleaning fluid, said cleaning fluid supply
3 source being connected to said pump, said cleaning fluid supply source in combination with said
4 pump being adapted to circulate water in a predetermined manner through at least two of said
5 first supply line, said second supply line, said first return line, said second return line, said supply
6 tube, said drain tube, and said conduit.

1 11. The fluid supply system of claim 9, wherein cleaning fluid in said cleaning fluid
2 supply source is maintained at a predetermined elevated temperature by a heating element.

1 12. The fluid supply system of claim 11, wherein said first supply line is thermally
2 coupled to said cleaning fluid of said cleaning fluid supply source for selectively heating said
3 first fluid.

1 13. The fluid supply system of claim 11, wherein said second supply line is thermally
2 coupled to said cleaning fluid of said cleaning fluid supply source for selectively heating said
3 second fluid.

1 14. The fluid supply system of claim 1, wherein said first fluid is aqueous fluid, and
2 said second fluid is a fluid that is reactive to ultra-violet light.

1 15. The fluid supply system of claim 9, wherein when said conduit valve means is
2 positioned to allow cleaning fluid from a cleaning fluid source to be pumped by a pump through
3 said first supply line, said first valve member, said conduit, said supply tube and said drain tube
4 to clean the fluid supply system.

1 16. A method of supplying fluid to a press, said method
2 comprising the steps of:
3 supplying a first fluid to and from said press via a supply tube and a drain tube
4 respectively, said supply tube and said drain tube being connected by a conduit means, said
5 conduit means comprising a first valve in a closed position;
6 stopping the supply of said first fluid
7 draining said first fluid from said press via said drain tube;
8 switching from said first fluid to a cleaning fluid;
9 adjusting said conduit means to an open position which allows fluid flow therethrough;
10 supplying said cleaning fluid through said supply tube, said drain tube and said conduit
11 means;
12 stopping the supply of said cleaning fluid;
13 draining said cleaning fluid from said supply tube, said drain tube and said conduit
14 means;
15 switching from said cleaning fluid to a second fluid;

16 placing said first valve in a closed position to prevent fluid flow therethrough; and
17 supplying a second fluid to and from said press via said supply tube and said drain tube.

1 17. The method of claim 16, further comprising the step of stopping the supply of
2 said second fluid.

1 18. The method of claim 17, further comprising the step of draining said second fluid
2 from said press via said drain tube.

1 19. The method of claim 18, wherein said method is repeated after said step of
2 draining said second fluid from said press.

1 20. The method of claim 18, further comprising the steps of:
2 switching from said second fluid to said cleaning fluid;
3 adjusting said conduit means to allow fluid flow therethrough;
4 supplying said cleaning fluid through said supply tube, said drain tube and said conduit
5 means;
6 stopping the supply of said cleaning fluid; and
7 draining said cleaning fluid.

1 21. The method of claim 16, wherein said conduit means further comprises a second
2 valve.
